

Ultra-light design, unsurpassed quality

The Jabra GN2100 is our award-winning headset series for business and contact-center professionals. In addition to delivering unsurpassed sound quality and crystal clear conversation, the headset's sleek profile and lightweight, ergonomic design provide a unique combination of style and comfort.

- Exclusive lightweight design with titanium-look headband and boom arm
- Four wearing styles, plus sound in 1 or 2 ears
- Choice of boom arms and microphones for optimum voice quality
- VoIP and hi-fi stereo versions

With optimized versions for both traditional telephony and Voice over IP (VoIP), many users say that the Jabra GN2100's excellent sound quality gives them the feeling they're having a "face to face" conversation. Moreover, a choice of two patented boom-arm designs and two different microphones – omnidirectional and noise-canceling – makes it possible to customize the headset to match both the

acoustic properties of the office environment and the technical requirements of the individual phone. Like all our high-quality professional headsets, the Jabra GN2100 is equipped with our PeakStop™ technology, which protects users from harmful sound spikes and other loud noises.

The Jabra GN2100 is available in a variety of wearing styles. The attractive 4-in-1 model takes individual choice to a new level allowing each user to select the wearing style that fits their personal preference – the comfortable neckband, the popular lightweight headband, the adjustable FlexLoop, or the SureFit® earhook. For those who know which style best suits their needs, headband, earhook, or neckband models can be ordered individually. The neckband wearing style is also available with the choice of sound in right or left ear.

For the ultimate in hi-fi stereo sound, the Jabra GN2100 is also available in a plug-and-play, Microsoft Windows® compliant USB version with in-line sound controls.
